

ABSTRACT OF THE DISCLOSURE

A display seat for displaying glass and crystal articles of display includes a seat body which is a plate or a layered plate formed from a transparent plastic material or glass. The seat body has a bottom portion formed with a recess.

- 5 A circuit substrate board having a plurality of light emitting diodes is insertably disposed in the recess. The display seat can be connected to an external power source or a battery source to establish electrical connection for activating the light emitting diodes. Shallow grooves can be formed in a top portion of the seat body for placement of round or curved articles of display. Beams of light
- 10 emitting from the light emitting diodes penetrate through the plastic or glass seat body toward the articles of display on the seat body.
